

- **Platform** Artificial Intelligence based platform for the discovery and design of new genomic medicines
- **Scope** R&D and non-clinical developments with academic, biotech and pharma partners
- **Value** Accelerate, de-risk and optimize the discovery and development of new biological assets
- **Who** Deeptech startup based in Paris and Boston with 25+ scientists, engineers and business professionals

WhiteLab's AI for Genomic Medicine

WHITELAB
GENOMICS

Cell therapies incl. CAR-T

Gene therapies incl. DNA based
therapies
(AAV, CRISPR & ZFNs...)

Oligonucleotide therapies
incl. antisense

RNA based therapies incl.
Lentiviral
therapies & RNA therapeutics

Target and Disease-agnostic

Tailor made partnerships

Clear commercial terms
and economics

Vector type independent

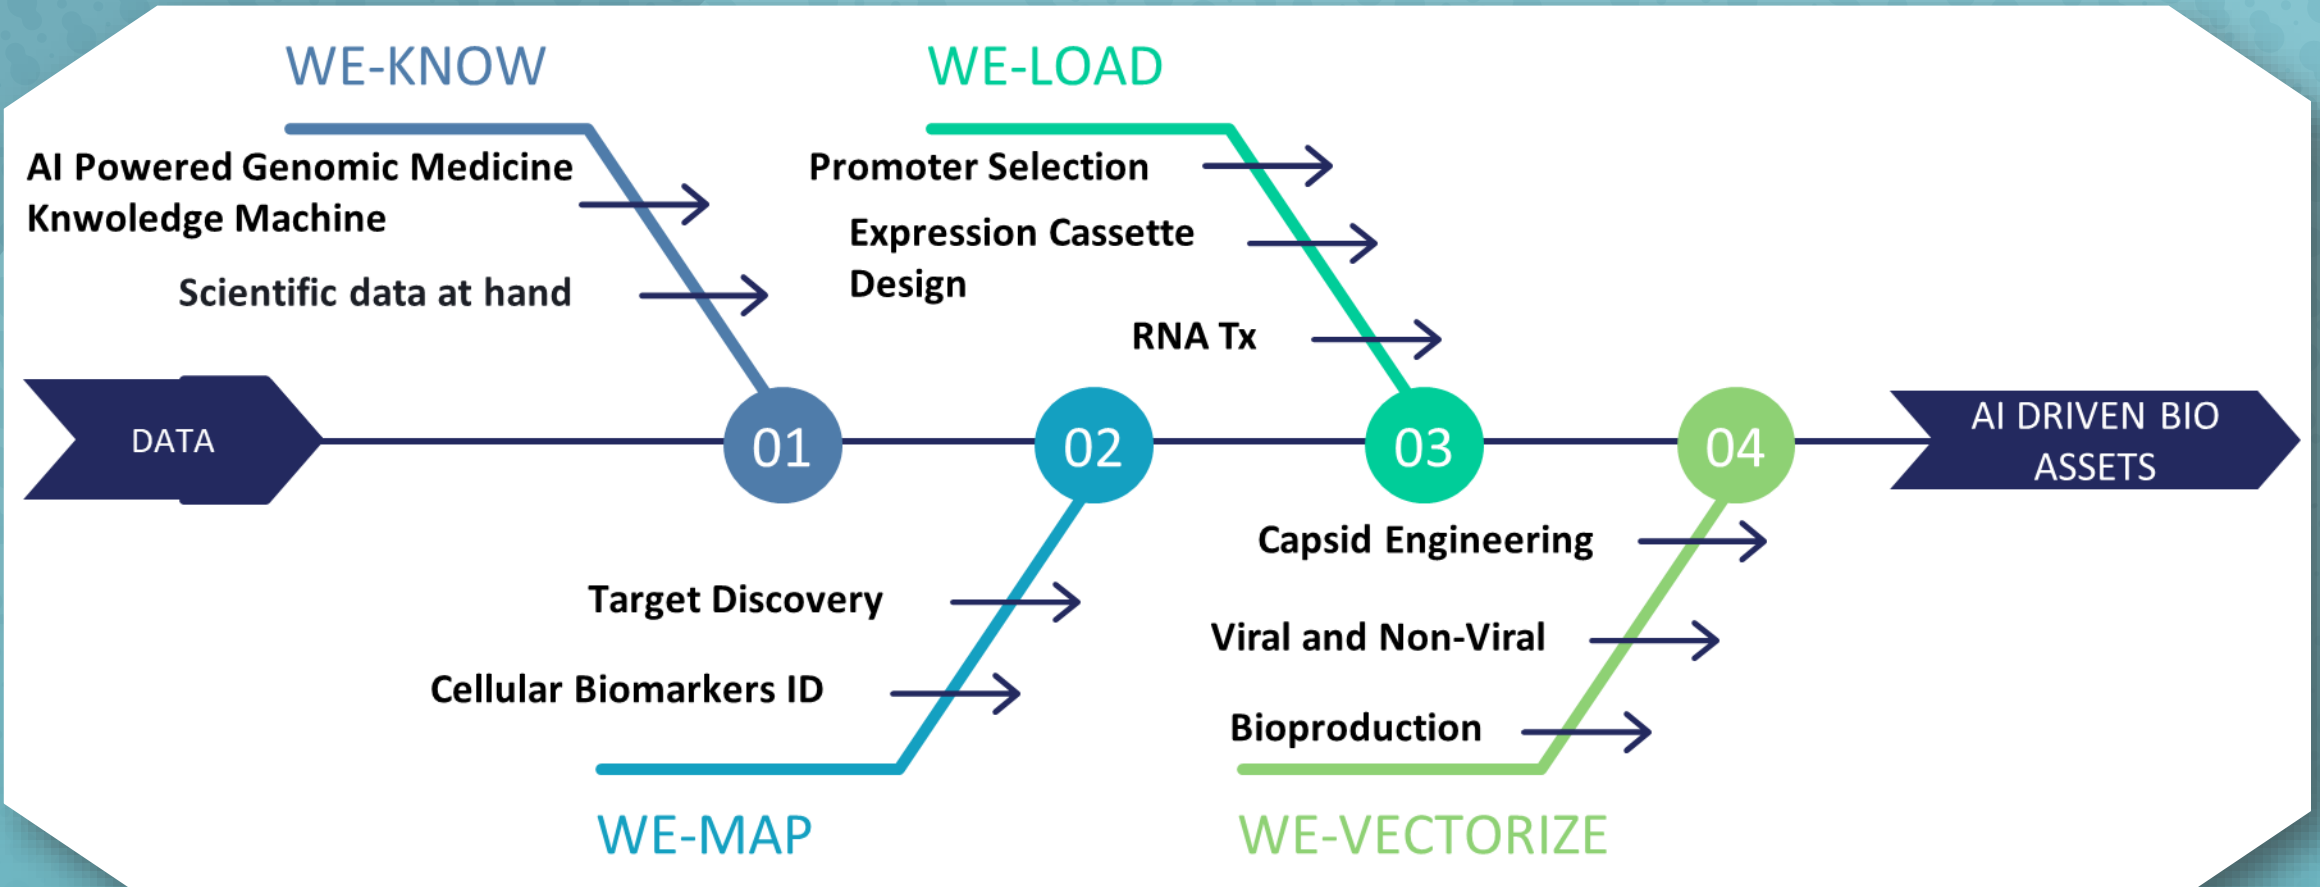

Fully in-silico approach

Internal platform combining
computational biology and
machine/deep
learning approaches
