

Click Therapeutics

Patients face gaps in treatment.

Existing treatments do not effectively address the neurological foundation underlying many conditions, and patients have limited access to quality behavioral-based treatments that could help them.

We believe in the power and potential of software as medicine to address those challenges.

Prescription Digital Therapeutics with robust clinical evidence can transform treatment options

Digital Health (DH)

Digital Health is a catch-all term for any technology that seeks to provide value in the healthcare system.

It includes apps for fitness & wellness, screening & diagnostics, and virtual care/telemedicine.

Digital Therapeutics (DTx)

DTx are software-based interventions with the intention to **prevent, manage, or treat** a medical disorder or condition.

- Under FDA Enforcement Discretion
- Minimal clinical evidence

Prescription Digital Therapeutics (PDT)

PDTs are software-based interventions that are regulated by the FDA, validated by clinical trials, and prescribed by a licensed healthcare professional (HCP) to **treat** a disease.

- FDA regulated
- Robust clinical evidence
- Require prescription from a licensed HCP

Click Therapeutics

A science-led biotechnology firm developing prescription digital therapeutics.

Our biochemistry is digital and our products are evidence-based mobile applications, creating value where pharmacotherapy alone is not enough.

- Established in 2012
- Headquartered in NYC
- \$89m in total capital raised
- Development partnerships with Boehringer Ingelheim & Otsuka
- Leading prescription digital therapeutics platform
- FDA regulated, clinically validated
