

Digital Biomarkers to accurately monitor CNS disease progression

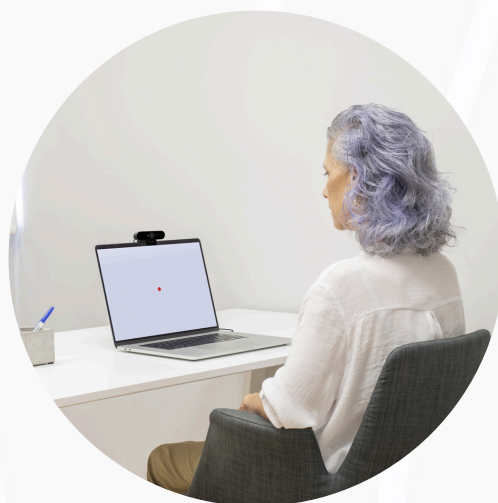

Seamless integration, minimal burden

Only requiring a 10-minute assessment, our software-based platform is easily integrated into any trial

Advanced oculometric analysis

Computer vision, machine learning and AI models are used to extract dozens of oculometric measures

Valuable clinical insights

Translating the intrinsic connection between eye movements and brain regions into clinically relevant findings

The NeuraLight platform is an accurate and reliable assessment tool, used as an endpoint for drug development
