

COMPANY: Owkin

ABOUT THE PRODUCT

Owkin connects several of the largest medical research centers and pharmaceutical companies in Europe and the U.S. within a federated research ecosystem. Owkin Studio is a software application dedicated to medical researchers who want to use machine learning on health-care data to discover new biomarkers, build prognosis models, predict response to treatment, and understand the results from a biological perspective. Owkin Connect is a privacy-preserving, traceable, secure technology that allows the company to connect with research centers in the Owkin network. Using Owkin Connect's federated learning approach, the data do not move, only algorithms travel. This enables insights from the data to be collectively shared while guaranteeing privacy for patients and compliance with data ownership.
