

**PRODUCT: Sentinel™ Cerebral Protection System**

**COMPANY:** Boston Scientific Corporation

**THERAPEUTIC AREA & INDICATION:**  
Endovascular disease debris repair

---

#### ABOUT THE PRODUCT

The SENTINEL™ Cerebral Embolic Protection System (CPS) is the first and only device in the US to offer protection from the risk of stroke during TAVR. The SENTINEL CPS is an easy-to-use, minimally invasive, medical device, placed at the beginning of the TAVR procedure. In the SENTINEL IDE, 99% of patients treated with the SENTINEL CPS captured emboli, and the trial demonstrated a statistically significant, 63% reduction in stroke within 72 hours of the TAVR procedure with SENTINEL use. To date, more than 30,000 patients have been protected using SENTINEL CPS, and more than 600 strokes have been prevented.
