

PRODUCT: Sentinel™ Cerebral Protection System

COMPANY: Boston Scientific Corporation

THERAPEUTIC AREA & INDICATION:
Endovascular disease debris repair

ABOUT THE PRODUCT

The SENTINEL™ Cerebral Protection System (CPS) is the first and only device in the US to offer protection from the risk of stroke during TAVR. SENTINEL CPS is an easy-to-use, minimally-invasive, medical device, placed at the beginning of the TAVR procedure. In the SENTINEL IDE, 99% of patients treated with the SENTINEL CPS captured and removed emboli, and the trial demonstrated a significant, 63% reduction in stroke within 72 hours of the TAVR procedure with SENTINEL CPS use. To date, more than 50,000 patients have been protected globally using SENTINEL CPS.
