

PRODUCT: HeartLogic™ Heart Failure Diagnostic

COMPANY: Boston Scientific Corporation

THERAPEUTIC AREA & INDICATION:
Cardiovascular

ABOUT THE PRODUCT

HeartLogic™ is the first FDA approved Heart Failure Diagnostic in implantable cardiac therapy devices with remote alert capability. HeartLogic represents a new era of remote monitoring and management of heart failure. It proactively predicts worsening of heart failure and alerts clinicians to changes in patient status. This offers the opportunity to direct limited clinical resources to the patients in most need of medical attention and gives clinicians advanced warning to proactively intervene and adjust treatment, ultimately improving patient outcomes. HeartLogic changes the landscape by shifting heart failure patient care from reactive treatment to proactive management.
