

PRODUCT: **CUSTOMFLEX® ARTIFICIALIRIS**

COMPANY: Clinical Research Consultants, Inc.  
and HumanOptics AG

THERAPEUTIC AREA & INDICATION:  
Ophthalmology

---

#### ABOUT THE PRODUCT

The CUSTOMFLEX® ARTIFICIALIRIS is the first and only FDA-approved artificial iris to treat the eyes of adults and children with missing irises due to a congenital condition called aniridia, which affects 50,000-100,000 babies born in the U.S. annually, or damaged irises from injury or trauma to the eye. The surgically implanted device is a clinically proven safe, effective, revolutionary alternative to technologically complex iris reconstructions.

The CUSTOMFLEX® ARTIFICIALIRIS is custom manufactured for each patient to produce an optimal color match of the eye that is life-changing, resulting in eyes that look normal while improving the debilitating light sensitivity symptoms of aniridia.
