

**PRODUCT: Magtrace® and Sentimag®
Magnetic Localization System**

COMPANY: Endomag

THERAPEUTIC AREA & INDICATION:
Oncology

ABOUT THE PRODUCT

The Magtrace® lymphatic tracer is the world's first, non-radioactive dual tracer for lymphatic mapping in women with breast cancer.

Designed primarily for sentinel lymph node biopsies, once injected Magtrace® migrates quickly to the sentinel lymph nodes where it is retained for at least 30 days. It then emits a magnetic signal that helps surgeons to find those key sentinel nodes and remove them to analyse potential spread of cancer.
