Novel hormonal contraceptive vaginal ring  
that prevents ovulation and pregnancy over  
a full-year cycle of use

---

#### ABOUT THE PRODUCT

Annovera® is a one-year ring-shaped contraceptive vaginal system (“CVS”) and the first and only patient-controlled, procedure-free, reversible prescription contraceptive that can prevent pregnancy for up to 13 cycles (one year), empowering women to be in control of their fertility and menstruation. Over 200 million women globally lack access to a modern method of contraception; Annovera® provides women with another important contraceptive option that is fully under their control to insert and remove. Annovera® was developed by the Population Council, an international non-profit organization whose products are used by 170 million people globally, and is marketed in the US by TherapeuticsMD.
